

# IT Operations Hygiene Assessment

## Identify and Remediate Risks at Unprecedented Speed & Scale

Powered by Contender Solutions & Tanium

The goal of better IT Hygiene is to identify, isolate, and remediate risks to your environment with unprecedented speed and scale. In this era when security risks are continually evolving, it's more important than ever to protect the data and assets that are vital to your ongoing competitiveness.

What businesses find is that IT Hygiene starts with visibility, yet **most IT leaders lack the ability to precisely answer simple questions about the assets in their environment.**

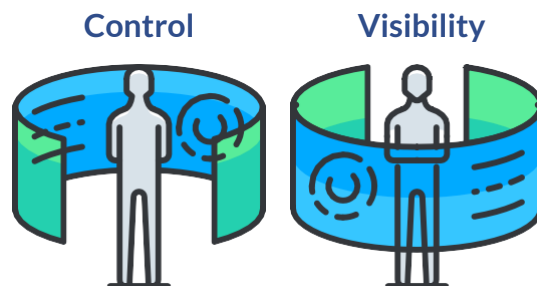

- *What assets do I have?*
- *Am I exposed to new vulnerabilities?*
- *What is my patch efficacy? How quickly can I deploy a patch?*
- *What applications am I running? Are they configured within policy?*
- *How quickly can I identify and remediate a threat?*

Ultimately, answers to these questions only matter if they are actionable. The pivot from insight to action is where IT Hygiene breaks down.

Our IT Hygiene Assessment leverages 30+ metrics designed to evaluate the IT Hygiene of your environment.

The available metrics focus on:

- Asset Discovery and Inventory
- Vulnerability Management
- Patching & Software Distribution
- Asset Health

With visibility and control, your existing data repositories like ServiceNow and Splunk become an authoritative source; generating insights that allow you to confidently (and quickly) take corrective action.
